

Minivec...son of Vector!

Following the enormous success of our Vector III – now a classic we decided to go a step further yet back with the Vector Mini – or to give it a buzz name MINIVEC!

Designed to have all the plus points of its dad the vector III and none of the niggles, our designer Dr. James Hammond decided to go the whole hog and give this little whizzer a whole new look.

So what's so special?

The wings and tail planes have been curved yet retain the classic Vector look, the fuselage is softened with a larger, more curvaceous fin and the ballast now sits in the wings. Basically the clean design, affordability and plain good looks make this a plane that anybody would want in their stable.

Performance?

Well for something that breaks down into a package that can easily be taken anywhere, the flight performance is simply stunning – period. Any aerobatic maneuver that is possible for a sailplane to perform is accomplished with ease, and unlike it dad, the Minivec will tumble if outrageous control movements are your bag.

This is simply an affordable bundle of fun with a cool new look that we hope will become as much of a classic as its dad.

Options include:

Wing/tail/fuselage bags

Ballast
